
RSNA training set
4,407 studies, 24,371 series,
one report per study
Hidden test set
≈1,284 studies
(labels never released)
4,349 studies
report labels only
58 studies ($\mathcal{G}_{58}$)
expert labels + report
Development partition
30%, ≈385 studies
>60 configurations scored
informed which changes
were kept ⇒ exploratory
Training of every reader:
5 report-grouped folds (OOF)
or full data (students)
Never in gradient updates;
diagnostic for every model;
used in some adoption rules
Final-test partition
70%, ≈899 studies
visible after all decisions
also used by the external teacher's
authors for model selection
only unbiased estimate
submitted inference programs
